### Abstract

This review gives some information about imidazole ring as a ( ligand , complex , antimicrobial , antimalarial , anticancer , uses , applications , linked with active groups such as Schiff base , azo group , ..).

### Keywords: Uses, Applications

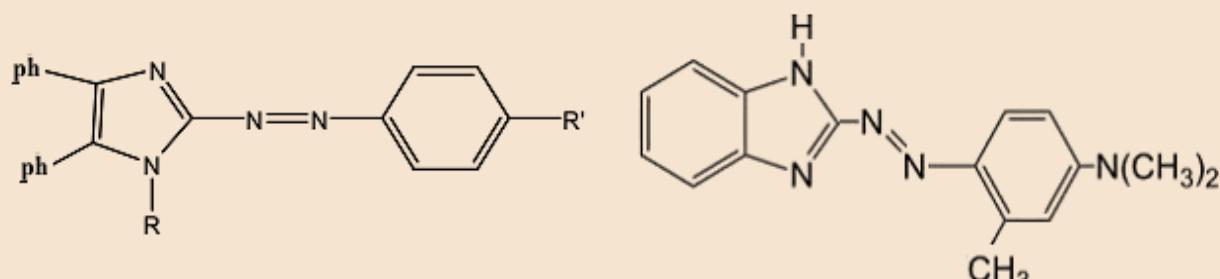

Imidazole ring has five membered ring systems that contain hydrogen binding domain, and electron donor nitrogen system<sup>(1-3)</sup>.The first imidazole was described by Fischer (1882), but the nature of the ring system was demonstrated by Freud and Kuhn (1890)<sup>(4-6)</sup>.

Imidazole are important because their biological activity among their isomer, particularly the imidazole possessed a broad spectrum of biological activities including antimicrobial<sup>(9)</sup>,antituberculosis<sup>(7-11)</sup>, antioxidant<sup>(12-16)</sup>, anti-inflammatory<sup>(17-20)</sup>, anticonvulsants<sup>(21-25)</sup>, antidepressant and anxiolytic<sup>(26-31)</sup>, antihypertensive<sup>(32-36)</sup>, anticancer<sup>(37-40)</sup> and antifungal activity<sup>(41-44)</sup>.

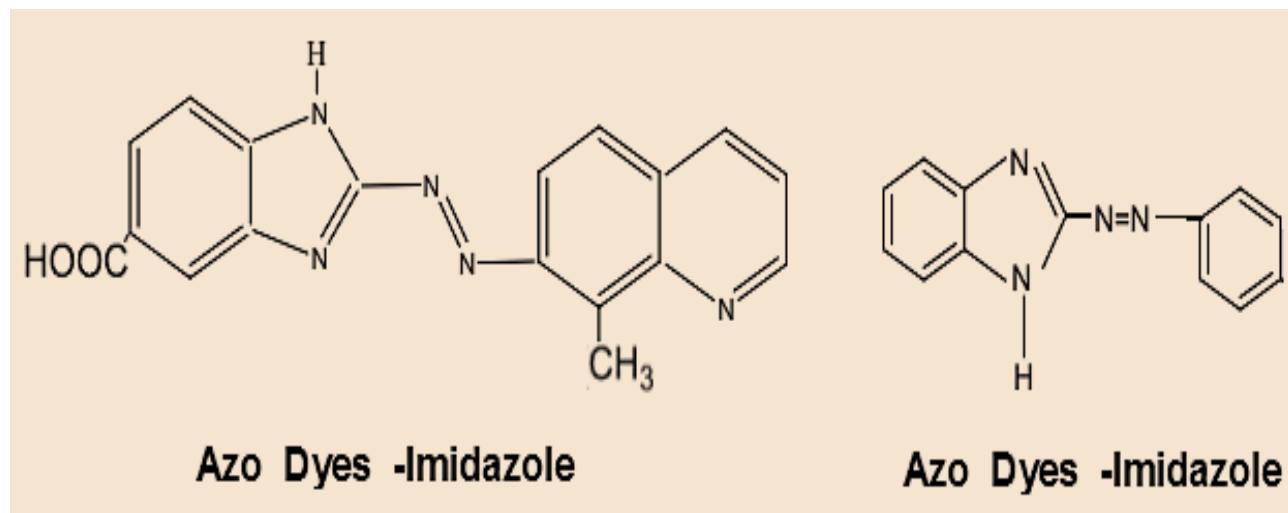

## Imidazole

Also, studying<sup>(45)</sup> reported that many imidazole derivatives were dissolved in diluted acid , and coupling reaction<sup>(46)</sup> hours at (0) °C to give final product .

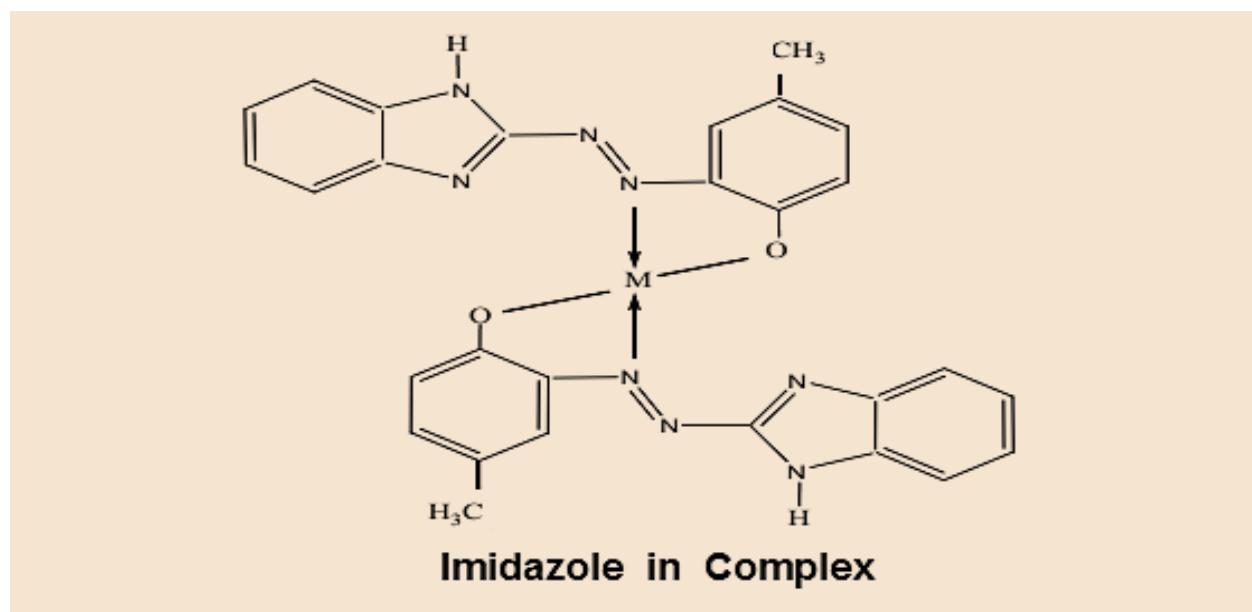

Coupling reaction that containing compounds react with and aromatic primary amine to produce imidazole- azo dyes<sup>(47)</sup>.These compounds have wide attention because of their pharmacological activities such as hypertensive

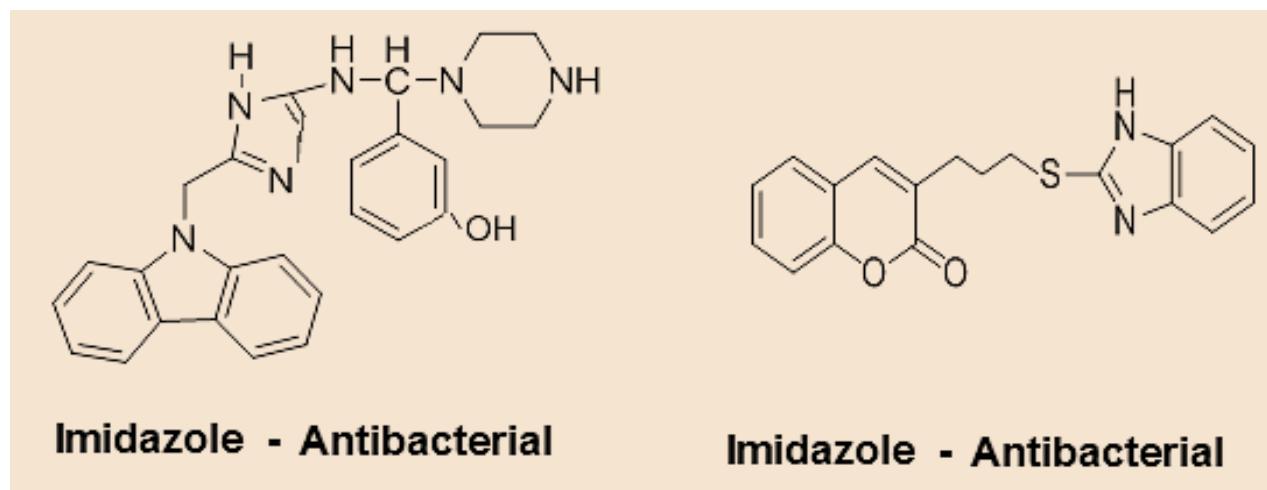

agents<sup>(48)</sup>, anticholinergic agents<sup>(49)</sup>, antispasmodics<sup>(50)</sup>, anticancer agents<sup>(51)</sup>, oxo-tremorine antagonists<sup>(52)</sup> and antibacterial agents<sup>(53)</sup>.

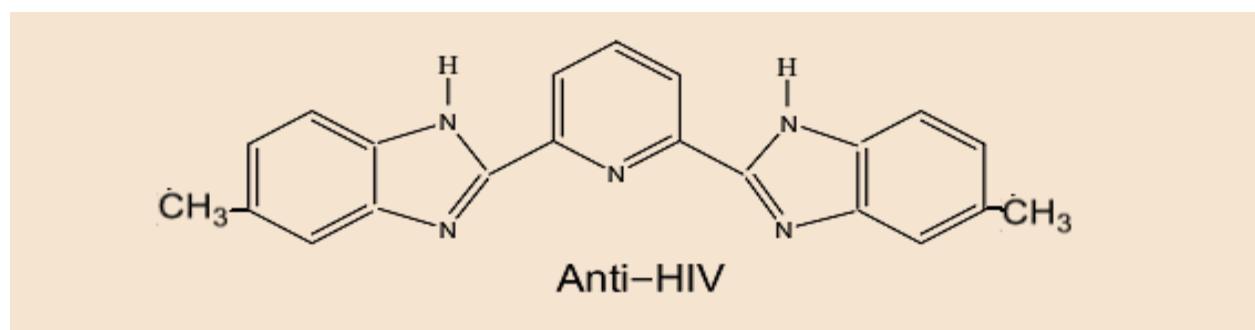

Other paper<sup>(54)</sup>: synthesized azo dyes-linked with phenol derivative from coupling reaction with different compounds in presence of diluted hydrochloric acid to yield ligands then complexation with some ions:

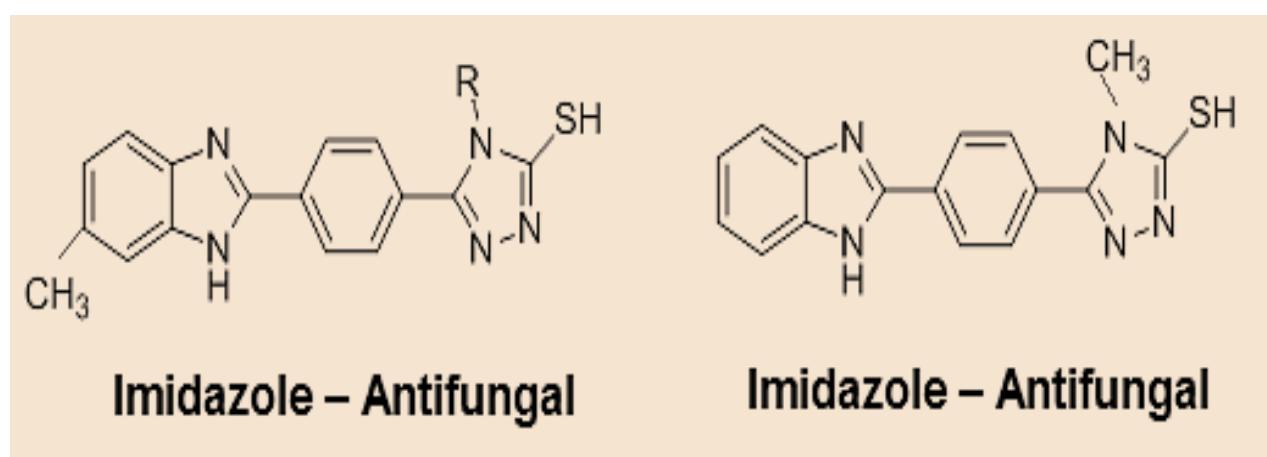

On the other hand, other paper<sup>(55)</sup> reported that imidazole – mannich derivatives<sup>(56)</sup> were prepared through reaction of secondary aromatic amine compound with carbonyl compound in presence of strong base, this mixture was stirred for (5) hours to formation many antibacterial compounds:

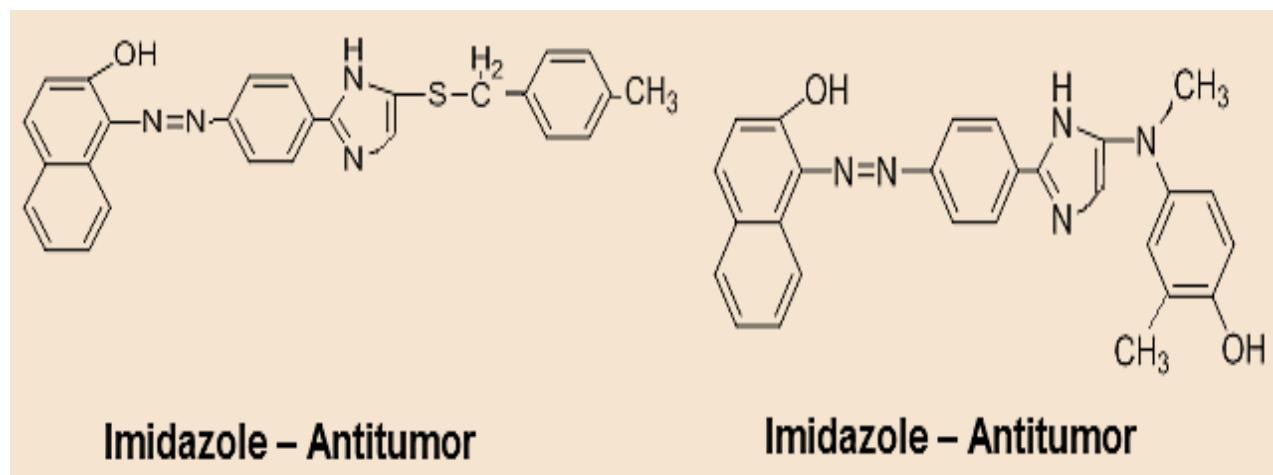

While studying<sup>(57)</sup> used bis- carboxylic acid and diamine compounds in closure conditions under refluxing for (6) hrs, then basified to give imidazole derivative as anti- HIV :

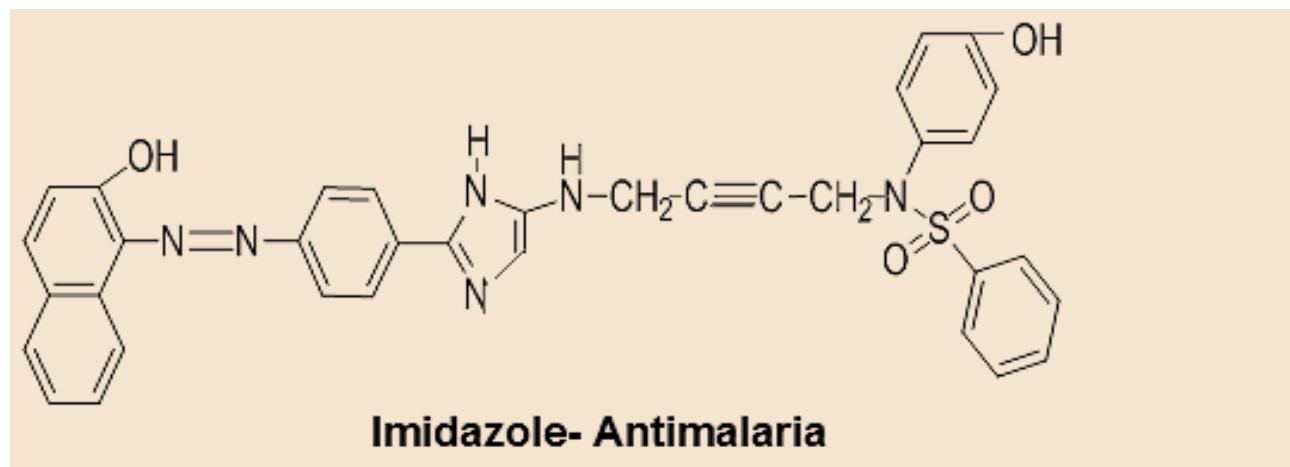

But in paper<sup>(58)</sup> reacted the imidazole with triazole in existence of closure conditions in DMF and stirred for (16 ) hours at room temperature then refluxing for (7 ) hrs to give final product antifungal compounds:

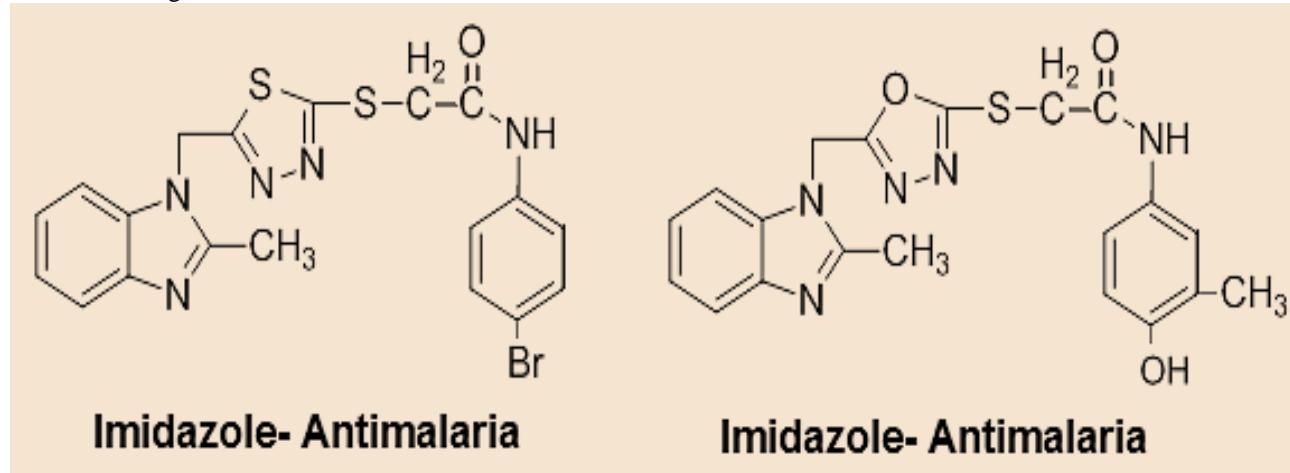

On the other hand researcher<sup>(59)</sup> added imidazole ring to sulfur and nitrogen compounds to formation compounds involving antitumor activities:

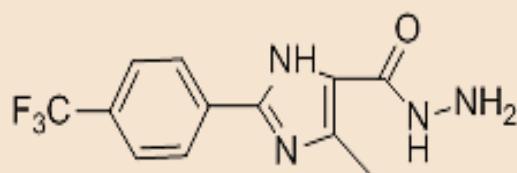

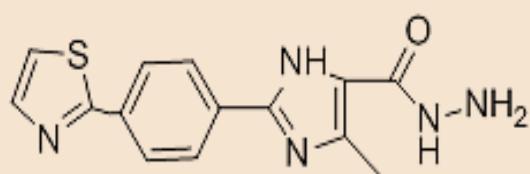

In new paper<sup>60)</sup> reported the preparation of imidazole -azo with sulphone compounds as antimalaria compounds:

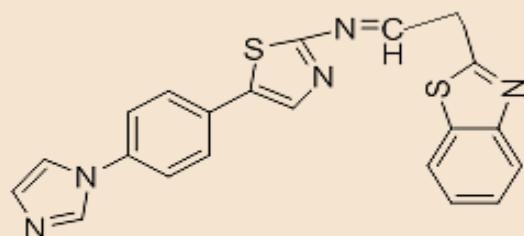

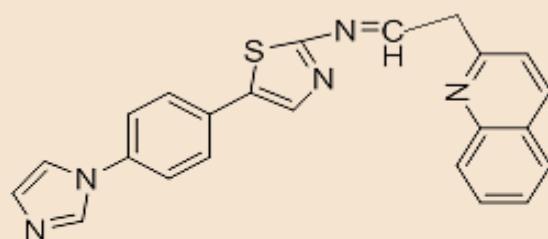

Antmalaria compounds<sup>(61)</sup> was yield from reaction of imidazole compound with active ring from thiadiazole or oxadiazole ring :

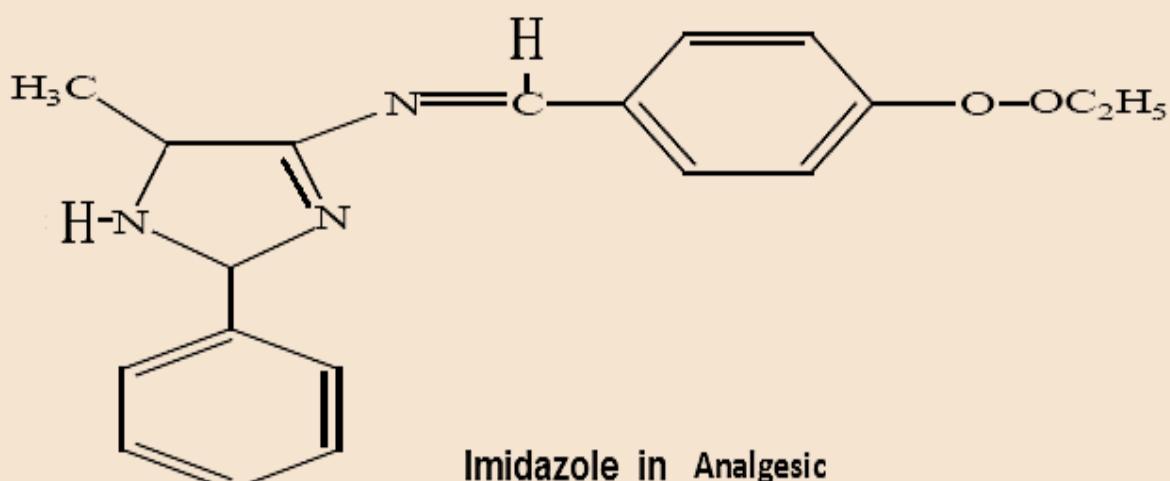

But other studying<sup>(61)</sup> formatted hydrazo- imidazole derivatives as antifungal compounds

**Imidazole – Antifungal****Imidazole – Antifungal**

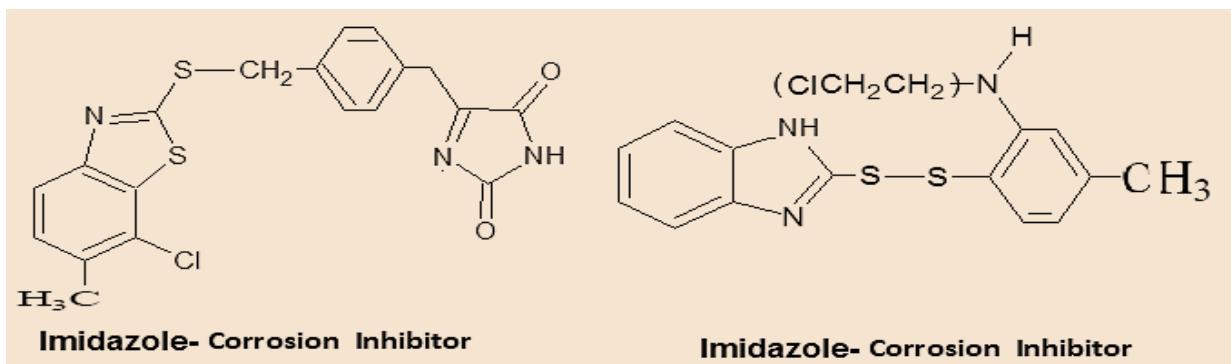

Paper<sup>(62)</sup> succeed to format imidazole – imine compounds from substituted compound reacted with different aldehydes under reflux (4) hours.

**Imidazole – Antitumor****Imidazole – Antitumor**

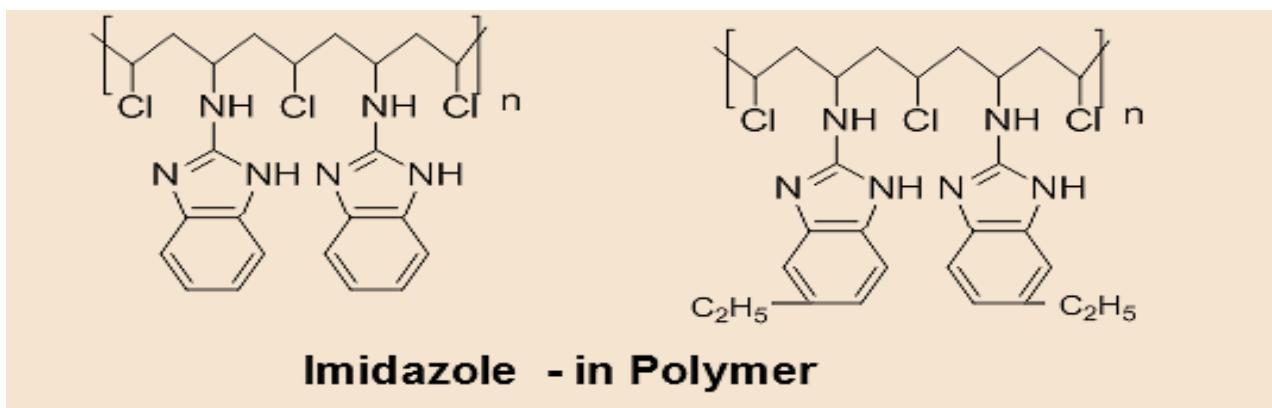

Other literature<sup>(63)</sup>: prepared azomethine –imidazole as analgesic by reaction of aromatic aldehydes with amine imidazole :

**Imidazole in Analgesic**

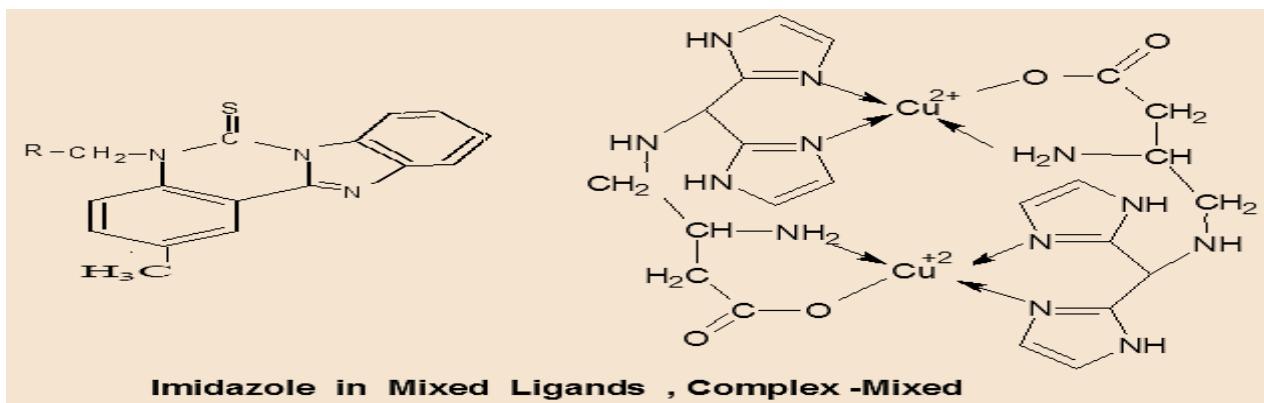

Imidazole derivative was prepared by reaction of benzimidazole<sup>(64)</sup>with sulfur or disulfide compounds to formation corrosion inhibitors compounds:

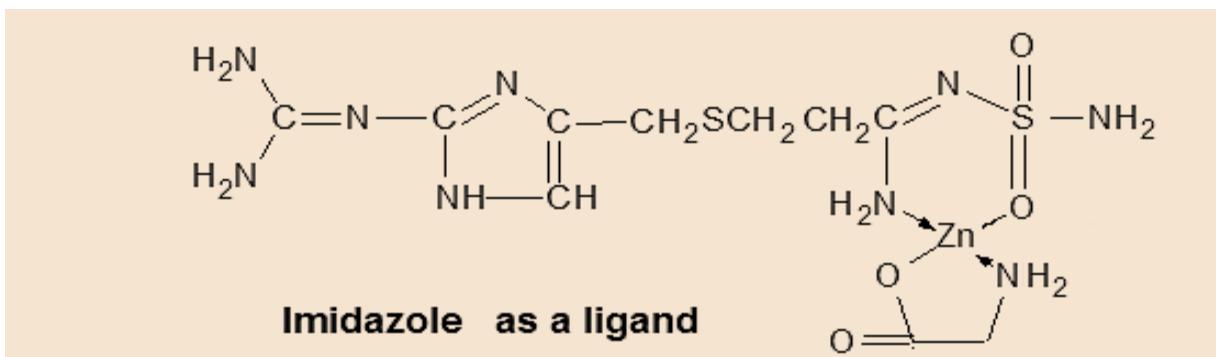

Studying<sup>(65)</sup>: prepared polymer (vinyl chloride) dissolved in dry tetrahydrofuran, in reaction with amine under reflux for (7) hours to give final products as a polymers.

Imidazole in Mixed Ligands , Complex -Mixed , which prepared from condensation reaction of di amine compounds with carbonyl compounds<sup>(66)</sup>:

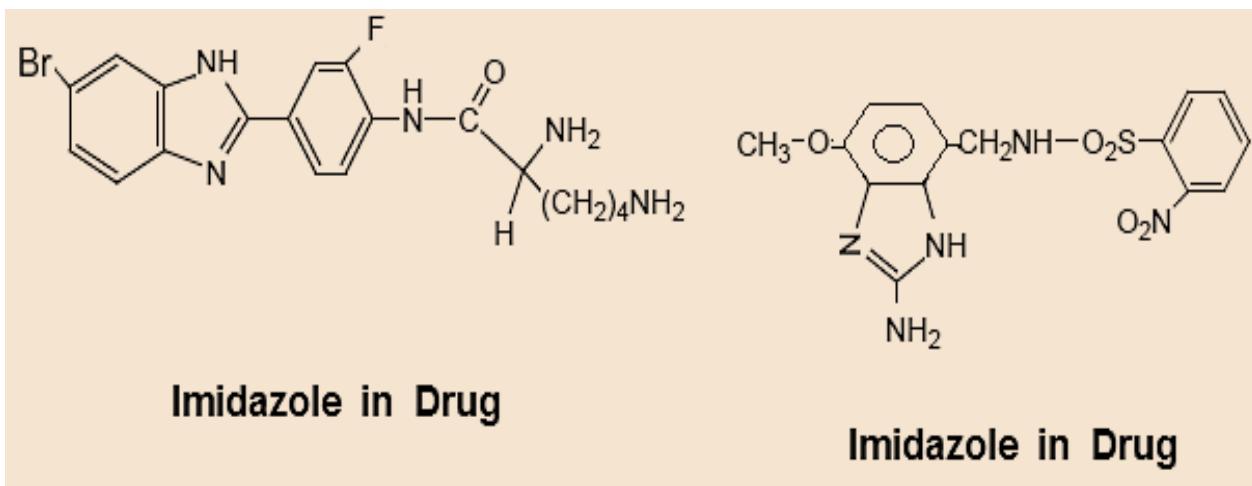

Also in other studying , imidazole ligand was prepared from sulphone derivative<sup>(67)</sup>:

### Imidazole as a ligand

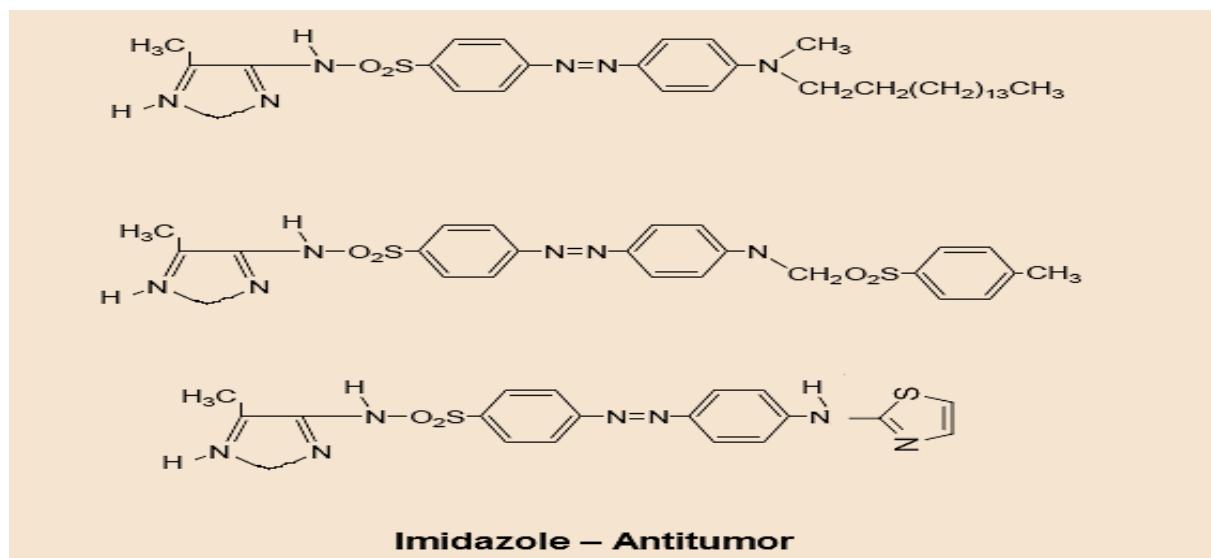

Other imidazole compounds were prepared as drugs in medical fields<sup>(68)</sup>:

### Imidazole in Drug

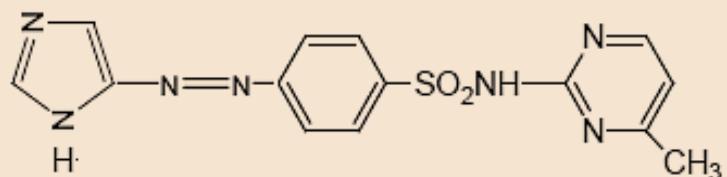

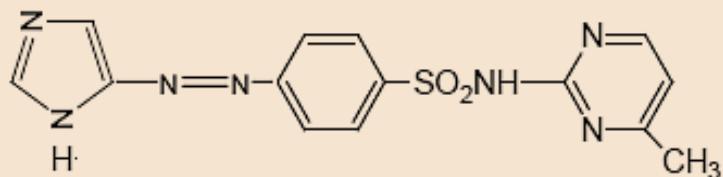

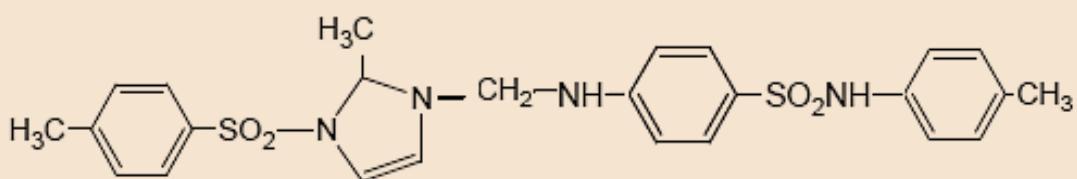

### Imidazole in Drug

But in new studies, imidazole compounds were prepared as antitumor in medicinal fields<sup>(69-70)</sup>:

### Imidazole – Antitumor

And other paper, antibacterial<sup>(71-73)</sup>sulphonamide compounds were synthesized:

## Imidazole - Antibacterial
